

IN THE ABSTRACT:

Please amend the Abstract as follows:

--~~The invention relates to a~~A method for rendering images on display devices with improved quality is shown. To allow adjusting luminance values of pixels depending on image information, it is proposed that contents of ~~said~~the image are analysed at least partially, a tone rendering curve based on ~~said~~the analysed image content is determined and luminance values of pixels within ~~said~~the image are adjusted according to ~~said~~the determined tone rendering curve.--
